

SIEMENS DIAGNOSTICS BUILDING 800

GLASGOW, DELAWARE

Construction consisted of renovations and additions to an existing building to install a new product line. The total square footage of the renovation was approximately 10,000 square feet and the new addition was approximately 2,000 square feet.

This work involved heavy mechanical piping and electrical to serve the production lines. Mechanical work consisted of DI water, compressed air, oxygen, nitrogen and exhaust.

The project was completed in less than six months, on time to meet critical dates for the customer to get their product to market.
