

Canine Partners for Life

Cochranville, PA

SC&A completed a new 5000 square foot state-of-the-art kennel facility for training service dogs in March 2000. The project structure was a pre-engineered steel building with emphasis on the interior for training and breeding. The kennels had all concrete construction with radiant floor heating under each kennel. The facility is capable of handling light veterinary duties and houses all offices needed for office staff support. Valuation was approximately \$956,000.
